From the ground up, Fluor is one of the world's largest international design, engineering, and contracting firms. Through subsidiaries, it provides engineering, procurement, construction, and maintenance (EPCM), as well as project management services for a variety of industrial sectors around the world. Its construction portfolio includes manufacturing plants, refineries, pharmaceutical facilities, health care buildings, power plants, and telecommunications and transportation infrastructure. Oil and gas projects account for more than 50% of sales. The group also provides operations and maintenance services for its projects, as well as administrative and support services to the US government.

Operations

The company is structured into five segments by sector: Oil & Gas, Industrial & Infrastructure, Power, Government, and Global Services. A separate group, Fluor Constructors International, provides unionized construction and construction services in the US and Canada.

Fluor’s Oil & Gas segment (50% of business) provides design, engineering, and construction and project management services to markets including upstream oil and gas producers, refiners, petrochemical manufacturers, and producers of specialty and fine chemicals. The unit also provides oversight of other contractors and procurement of labor, equipment, and materials.

The Industrial & Infrastructure (roughly 30% of business) segment provides design, engineering, procurement, and construction services for pharmaceutical and biotechnology facilities, commercial and institutional buildings, and mining, telecommunications, wind power, and transportation projects. The unit also participates in public/private partnerships to oversee financing and management of roadway and railway projects. One ongoing significant project is the world’s largest offshore wind farm development off the coast of the UK. The project is expected to help produce 25 gigawatts of wind energy by 2020.

Fluor’s Government Services segment (Less than 5% of business), another growing division, offers project management services primarily to the US Departments of Energy, Defense, and Homeland Security. It provides environmental restoration, engineering and construction, and operations and maintenance services for two former nuclear weapons complexes that are now DOE cleanup sites: the Savannah River site in South Carolina and the Hanford Environmental Management Project in Richland, Washington. Subsidiary Del-Jen provides military base operations and maintenance services and other logistical and infrastructure services around the world.

Fluor’s largest long-term job, a multi-billion dollar, multiyear project, is its LOGCAP IV contract to provide services to the US military, primarily in Afghanistan. However, defense spending is expected to decline, which could hurt
Researching a Privately-Held Company

Northstar Group Services, Inc.
New York, NY United States

This company is covered by Stuart Hampton, Esq.

Company Index
About This Company | Financials | News & Social | Products & Operations
Industry Information | Historical Events | Company Databook | Executives

DESCRIPTION

Asbestos, lead-based paint, nuclear materials, and toxic mold don’t scare U.S. Services, one of the top environmental contractors in the US with more than 30 offices across the country. The privately-held company provides integrated facility services such as remediation of hazardous materials, decontamination, and demolition. It serves clients in a wide range of business segments, from hotels and retail to commercial, industrial, and institutional. It also serves government and education segments. Customers have included AT&T, IBM, Marriott, Prudential, and Boeing.

Geographic Reach
Headquartered in New York City, the company works in all 50 US states. It has more than 30 offices nationwide.

Operations
U.S. Services offers design-build general construction, program management, hazardous material and mold abatement, asbestos control, remediation, demolition, as well as emergency response/blast recovery and services.

Subsidiary NorthStar Recovery Services provides emergency response and recovery services that help clients minimize damage and disruption following disasters.

Sales and Marketing
U.S. Services serves customers in the commercial, education, government, health care, hospitality, industrial, oil and gas, power, and retail segments.

Strategy
In addition to its core business activities, U.S. Services offers complementary services that leverage expertise in remediation, such as asbestos abatement, decontamination and decommisioning, and drying and dehumidification. It has provided services to aid in detecting and containing nuclear and radiological threats for federal agencies like the Department of Homeland Security, the US Department of Energy, and the US Customs and Border Protection Agency.

In 2012 U.S. Services completed the decommisioning of the University of Arizona’s 50-year-old Nuclear Reactor Laboratory.

Merger and Acquisitions
In 2012 the company acquired Washington State-based Randolph Construction Services, which provides design-build contracting services for commercial, industrial, and government clients.
